

## ABSTRACT OF THE DISCLOSURE

A brake booster assembly is temporarily mounted on a vehicle dash panel by use of a clip. The brake booster assembly includes a housing and at least one mounting bolt extending outwardly from an outer wall of the housing. The  
5 mounting bolt extends through an aperture of the vehicle panel to mount the brake booster to the vehicle panel. The clip is fastened to the mounting bolt. The clip has a securing structure for engaging with a wall of the vehicle panel to at least temporarily mount the brake booster to the vehicle panel.
